

Installation and Location Assessment

How high is your water table?

What type of soil do you have in your location (sandy, clay, rocky, loamy)?

How well does your soil drain (drains well, does not drain well)? Are there large rocks, shale or other obstacles?

Do you have permafrost?

How close to the proximity to your home, do you plan to place your shelter?

Do you want an entrance into your home or basement or garage?

Do you need an entrance that is more than the 48" inch diameter?

Is this new construction?

Can your landscaping easily be disturbed?

Do you have a sprinkler system?

How densely forested is your area (light, medium, heavy)?

Where are your utilities accessed?

Will you need to truck out your backfill?

Where, in proximity to your home, do you plan to place your shelter (front, side, back, under driveway, etc.)?

Can a crane and large truck easily access this spot?
